TOPIC AND PROJECT IDEA

Projects are expected to exclusively contribute to two outcomes within the context of the Green Deal objectives:

Development of systems based on AI and robotics to improve energy efficiency, manage waste in an automated manner and promote the circular economy, in line with our commitment to providing social and health services in a sustainable manner.

Implementation of AI solutions and data analytics to optimize our resources, reduce waste and maximize efficiency across our operations, supporting our mission of providing quality care while minimizing our environmental impact.

TOPIC AND PROJECT IDEA

The democratization of artificial intelligence can close the digital divide and improve the quality of life. Recognizing its value in a variety of sectors, from healthcare to agriculture, its continued use promises to transform our lives. The integration of artificial intelligence into various applications has the potential to adapt to the changing needs of society and improve support for communities around the world.

JUNTA DE EXTREMADURA

Consejería de Educación, Ciencia y Formación Profesional

Partners sought

- ❖ Organizations interested in meeting and thinking about a specific proposal:

- ❖ Ethical aspects of AI

The ethical aspects and democratization of AI is very important and can harm certain groups of people and experts are needed ensure all these aspects.

- ❖ Research centres with expertise in AI

Research centers because we are not AI developers, and we need an organization that does development and has a more technical profile

- ❖ Social-health data research centres

More technical profile and we can validate that what has been investigated has applicability.

- ❖ Socio-health companies

- ❖ Communication and marketing companies
