Insights into Human Performance: Utilizing AI and Wearables for Personalized Health and Well-being Optimization

Dr. László Grand

Pázmány Péter Catholic University, Faculty of Information Technology and Bionics

Polaritás-GM Ltd.

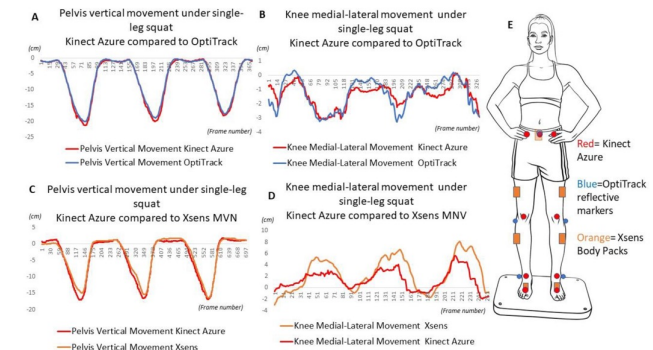

Lab Summary

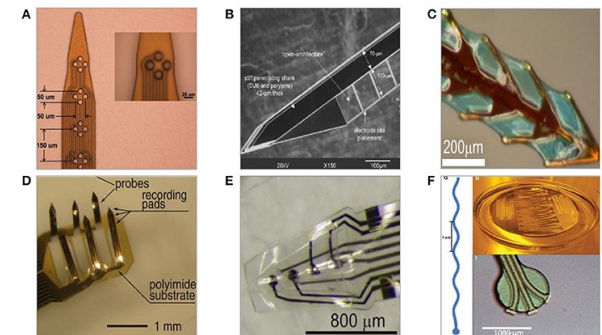

- Research activities: wearable sensors, machine- and deep learning based sport analytics, computer vision
- Expertise:

- Wearable and invasive sensor design and testing
- Biomedical measurements from animals and humans
- Machine learning, deep learning and computer vision for motion analysis and biological time-series processing
- App design
- Cloud infrastructure design

Uhlár et al., 2021, MDPI

Szostak et al., 2017, Frontiers in Neuroscience

Topic for collaboration and for a Horizon Europe project

“Integrative Wearable Health Monitoring System for Stress Management and Well-being Enhancement”

- Wearables (non-invasive and semi-invasive(skin penetration))

- Low-power ECG, HRV
- Low-power accelerometer, gyroscope, magnetometer
- Low-power EEG for long-term use (brain activity)
- Low-power, miniature EMG (muscle activity)
- BLE radio transmission
- **Skin penetrating micro needle patch**
- **Molecularly imprinted electrochemical sensors**
- **Microfluidic channel integrated into a wearable**
- **Integrated system with miniature footprint**

- Stress related biomarker research

- CORTISOL, sodium ion, potassium ion, pH, lactate, glucose etc.

- AI methods for understanding individuals' stress factors and for automatized personal coaching

<https://medium.com/@hello.stresschecker/a-way-to-objectively-measure-stress-86a42fb7718f>

Ideal partners and expertise

- **Sensor research**

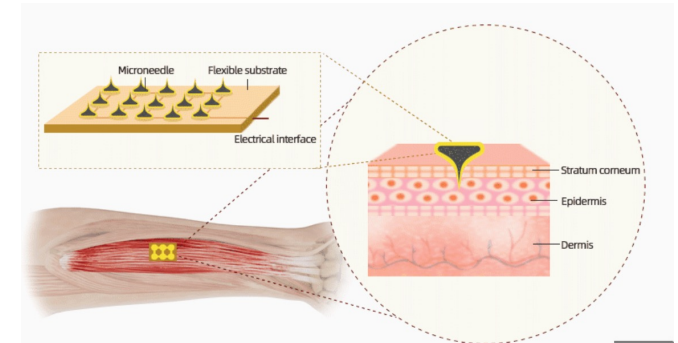

- Non-invasive and/or semi-invasive (skin penetration) sensor development
- Thin-film device design and fabrication
- Microfluidic devices research and integration into wearables
- Molecularly imprinted electrochemical sensors
- Expertise in miniature spectroscopy devices
- Expertise in low-power electronics design
- Expertise in circuit design for wireless data transmission
- Access to Fab Lab and/or cleanroom
- System integration

- **Biosignal processing**

- Onboard FPGA data processing
- Optimizing algorithms for low-power electronics processing

- **Biology**

- Stress related biomarker detection from sweat and/or blood
- Cortisol and other hormones (adrenaline, noradrenaline, thyroid), inflammation markers (C-reactive protein, IL-6)

SYNLAB

- SynLab is a leading medical diagnostics company operating across Europe.
- Offers a wide range of diagnostic services, including laboratory testing, imaging, and health screenings.
- Utilizes state-of-the-art technology and follows stringent quality standards for accurate and reliable results.
- Provides services for individuals, healthcare professionals, and corporate clients.
- Focuses on innovation, research, and personalized medicine to improve patient care.
- Collaborates with healthcare providers and institutions to enhance diagnostic capabilities and patient outcomes.
- Committed to excellence in healthcare, ensuring accessibility and efficiency in diagnostic services.
